BC

CHARACTERISTICS & OPERATION

The Plate Spreader has been designed for the gluing of pieces such as stair treads and table tops. Using the spreader is a simple, yet effective way of applying adhesive to parts up to 4 feet long, in edge or face gluing application. After dipping the stainless steel grid into the glue reservoir, the adhesive is transferred to the material upon contact with the grid.

- Standard sizes: 6" x 48";
- Stainless steel reservoir;
- Aluminum cover;
- Stainless steel glue transfer grid;
- Spring loaded dipping mechanism.

OPTIONS & SPECIFICATIONS

- Custom configurations available upon request.
