J60 HYDRAULIC DOUBLE-END BORING/CHUCKING

The J60 is an extremely versatile yet simple to operate boring machine designed to provide precision boring and/or machining at ends of panels or boards.

CHARACTERISTICS & OPERATION

- The J60 is an extremely versatile yet simple to operate boring machine designed to provide precision boring and/or machining at ends of panels or boards.
- This machine is equipped with two heads moving back and forth hydraulically (4" stroke). It can produce a great variety of patterns with unmatched speed and accuracy. The position of each head as well as the stroke and feed speed are easily adjusted.
- The J60 is available in 4, 6, 8 and 10 feet widths.

OPTIONS & SPECIFICATIONS

Depending on your application, the J60 can be ordered with any or all of the following features:

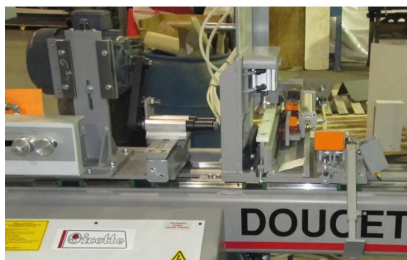

- Vertical clamp;
- Head swivel plate;
- Centering cone;
- V-block;
- Auto-feed;
- Trim saws.
